

**Amendments to the Specification**

Please replace the paragraph at lines 4-9 on page 22 of the specification with the following paragraph:

A glass cleaner ready to use composition was prepared by diluting the glass cleaner concentrate D of Example 1 with dilution water having a water hardness of 20 grain at a ratio of concentrate to water of dilution of 1:16. Ready to use glass cleaner D was compared to the Windex® glass cleaner from S.C. Johnson. Then panelists were asked to take both glass cleaners home for use, and all ten panelists selected [[glas]] glass cleaner D as the best.
